(57) Abstract :

The Autonomous Drone Technology for Human Rescue Operation is a cutting-edge solution designed to safeguard individuals, especially vulnerable groups such as , from threats like robbery, kidnapping, and harassment. Activated by a triple click of the SOS button on a mobile device, this system swiftly deploys an autonomous drone to the distress location using GPS coordinates. Equipped with advanced features such as attention-grabbing sounds and live video transmission, the drone assists in assessing situations and gathering critical evidence, enhancing overall public safety during emergencies. The BHAROSA mobile application facilitates seamless communication between users, drones, and law enforcement, ensuring rapid mobilization and efficient rescue operations.
